CLEANS
INTERACTIVE
TREATMENT
OF WATER
WITH
AcquaProcess

**EASY INSTALLATION
WITHOUT ANY MODIFICATION
TO THE WATER SUPPLY NETWORK**

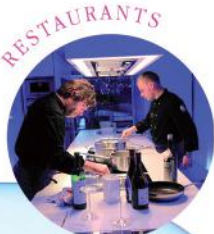

ANTI BACTERIAL COILS

ANTI LIMESCALE COILS

**LOW CONSUMPTION
OF ENERGY**

**NO MAINTENANCE
COSTS**

**GUARANTEED
FOR 7 YEARS**

Ecological treatment of water

✓ NO CHEMICAL PRODUCTS

- ✓ AVOIDS LIMESTONE DEPOSITS
- ✓ PREVENTS THE PROLIFERATION OF MICRO ALGAE
- ✓ PREVENTS THE PROLIFERATION OF BACTERIA
- ✓ NO MAINTENANCE COSTS

The ACQUAPROCESS system is made up of a generator which sends variable frequency and power signals and transmits this energy into the water through an inductor. This energy modifies the limescale deposits in the water making it soluble.

The inductor is attached directly to the water pipe needing to be treated, creating an electrical field of low frequency. This energy when transmitted to the water has the effect of causing the limescale to become soluble in water.

This soluble limescale is in suspension in the water in a powdered form.

Crystals form in the water and not on the inside of the pipes. It is reliable because it adapts to all variable parameters.

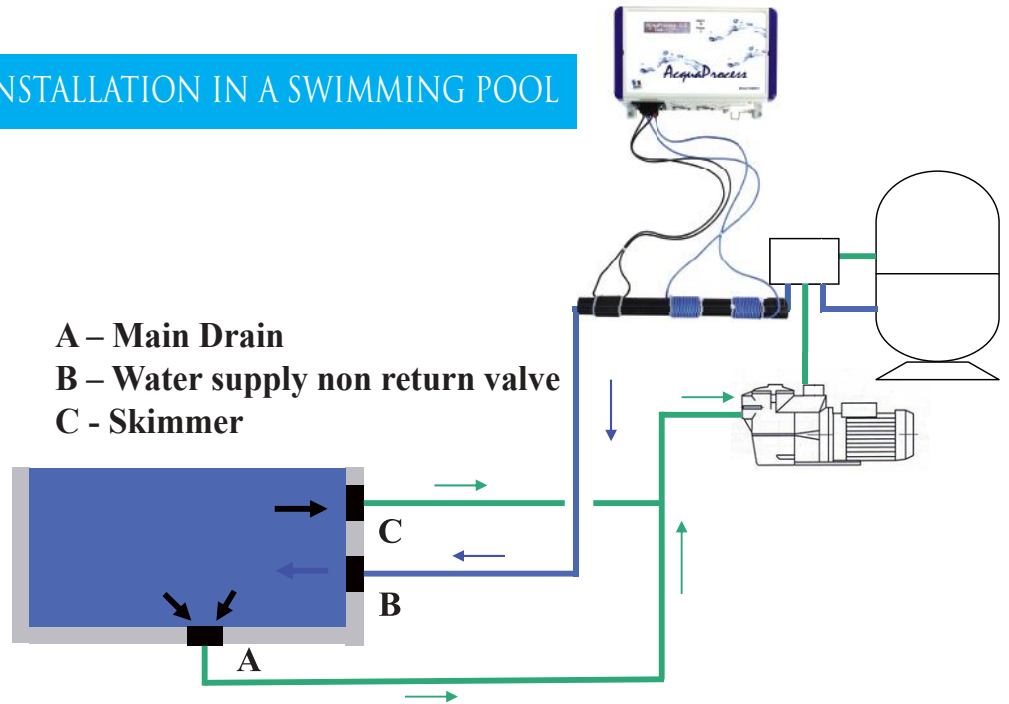

The water treatment is complex because it takes into account the hardness of the water as well as its temperature, its PH and the network of pipes, which differs from site to site.

This is why it is more reliable than other products on the market. Chemical treatments act on the elements present in the water and modifies their properties.

The ACQUAPROCESS system, with its triple coil goes far beyond treating just limescale. It also acts on the proliferation of bacteria and algae (including legionnaires' disease) without the use of chemicals.

The Acquaprocess system is a real innovation in the domain of natural water treatment. It prevents limescale deposits and cleans water pipes using a unique procedure of Low Frequency Induction.
